Summary

Software Engineer with hands-on experience in Core Java, Spring Boot, and object-oriented application development. Strong grasp of OOP, SOLID principles, and design patterns, with experience writing unit and integration tests (JUnit/TDD) and delivering RESTful APIs in Agile environments. Self-driven engineer who writes clean, testable code, collaborates effectively across cross-functional teams, and is committed to continuous learning and growth.

Technical Skills

Languages: Core Java, C#, C, C++, Python
Core Concepts: Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, Data Structures & Algorithms, Microservices Architecture
Backend: Spring Boot, Spring MVC, Spring Data JPA, .NET, RESTful Web Services, API-first Development
Web: HTML, CSS, JavaScript, React.js
Databases: MySQL, MongoDB, Redis
Testing: JUnit, Postman (API testing)
Tools & DevOps: Git, GitHub, GitHub Actions, CI/CD, AWS (Lambda, S3, API Gateway)

Professional Experience

Full Stack Developer – CCTech

Sep 2024 – Present

Project: Fabric Duct Design System

Java, Spring Boot, C#, .NET, React.js, AWS, MySQL

- Designed and implemented RESTful APIs using Core Java and Spring Boot, applying OOP and SOLID principles and reusable design patterns to build scalable, maintainable backend services.
- Wrote unit and integration tests (JUnit) to validate functionality, catch regressions early, and maintain high code quality.
- Built modular application components in C# and Java following API-first practices; built C# plugins for AutoCAD and Autodesk Inventor to automate engineering design workflows.
- Developed responsive frontend modules using React.js and JavaScript for real-time visualization of HVAC design data.
- Participated in code reviews, technical design discussions, and Agile ceremonies to deliver high-quality, reliable solutions.
- Contributed to CI/CD pipelines and AWS-based deployment workflows using GitHub Actions, and collaborated with senior engineers to troubleshoot issues and improve performance.

Projects

ChatsApp – Full-Stack Real-Time Messaging Application

Java, Spring Boot, Spring Security, WebSockets (STOMP/SockJS), Hibernate, MySQL, React.js, Redux, Tailwind CSS, Material-UI, Cloudinary, JWT

- Developed a full-stack real-time messaging application (WhatsApp Clone) featuring secure user authentication, instant messaging, status updates, and group management.
- Built low-latency, real-time messaging pipelines using WebSockets (STOMP protocol and SockJS) enabling live message delivery.
- Implemented secure, stateless authentication and authorization using Spring Security, JSON Web Tokens (JWT), and BCrypt password hashing.
- Designed a responsive UI using React and Redux for centralized state management, integrating the Cloudinary API for high-performance cloud image hosting.
- Optimized database performance and schema management using Spring Data JPA, Hibernate, and MySQL 8.0.

Education

B.E. in Computer Engineering

PCET's Nutan Maharashtra Institute of Engineering and Technology, Pune

Dec 2021 – May 2024

CGPA: 9.04

Diploma in Computer Engineering

Government Polytechnic, Pune

Aug 2018 – Jul 2021

Percentage: 88.87%

High School

Z.P. High School, Takalsing

Jun 2017 – Mar 2018

Percentage: 94%

Achievements & Certifications

- Solved 400+ Data Structures & Algorithms problems on [LeetCode](https://leetcode.com/), reinforcing strong analytical and problem-solving skills.
- HackerRank 5-Star in Problem Solving.
